Himanshu Kumar Mahto

Software Engineer

9044707947 | himanshumahto0102@gmail.com
linkedin.com/in/himanshumahto | github.com/himanshumahto

SKILLS

LANGUAGES
TypeScript | Java | C++ | Python | SQL

FRAMEWORKS
Angular | React.js | Android Studio | Jetpack Compose | Node.js

TOOLS & PLATFORMS
Git | Postman | Firebase | REST APIs | WebStorm | Mixpanel | Chrome DevTools

ENGINEERING PRACTICES
Component Reusability | Performance Optimization | API Design | UI Accessibility | Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Developer — Facets.cloud *Oct 2025 – Present*

- Engineered **release tagging system** in Angular across Release, Release History, and Release Details pages — custom tag create, assign & filter.
- Co-led **Angular-to-React migration** of 10+ screens, owning ~50% of components with full feature parity and zero regressions.
- Partnered with product team to **revamp platform UI/UX** across 3 core modules, translating Figma specs into responsive React views.
- Triaged and resolved **20+ critical CX-reported production bugs**, directly strengthening reliability for paying customers.
- Delivered **Module Registry** UI — 5-tab interface (specs, README, outputs, history, input deps) serving 100+ platform modules.
- Enabled full **module lifecycle via UI**: create, upload, and publish custom Terraform modules, cutting deployment steps by ~40%.
- Architected 7 reusable React components (dropdowns, tag badges, paginated tables), cutting code duplication by ≥20%.
- Established component API contracts and prop-type conventions adopted across a 6-engineer front-end team.

Software Intern — Facets.cloud *Jan 2025 – Sep 2025*

- Shipped **6+ Angular features** end-to-end: Project Types, resource management tools, and bulk operations workflows.
- Slashed page load times by **10–15%** via API response caching, pagination, and lazy loading on data-heavy screens.
- Refactored 8+ Angular services to centralized state management, eliminating ~30% of redundant API calls across components.
- Diagnosed excessive change-detection cycles and unsubscribed observables, stabilizing responsiveness in 5+ modules.
- Introduced real-time diff views and audit-trail displays, reducing engineer debug time by ~25% for infrastructure changes.
- Collaborated with backend engineers to co-design REST API contracts for 3+ new platform features.
- Overhauled bulk operations UI, enabling engineers to manage 100+ resources in a single workflow.

Tech Intern — Facets.cloud *May 2024 – Dec 2024*

- Instrumented **Mixpanel** across 15+ user flows; funnel data directly informed 2 major UX redesign decisions.
- Resolved critical UI bugs (broken forms, inaccessible ARIA roles), raising Lighthouse accessibility score by 12 pts.
- Improved QA documentation pipeline, cutting average bug-resolution cycle from 5 days to 2 days.

PROJECTS

Multiple Disease Predictor | GitHub *Jan 2024 – May 2024*

- Fine-tuned a **ResNet101V2** model on a labeled chest X-ray dataset, achieving **87.5% validation accuracy** for multi-class disease classification.
- Integrated model inference into an Android prototype via a Flask REST API, enabling real-time disease screening from the mobile camera input.

Spendify: Expense Tracker | GitHub *Mar 2023 – May 2023*

- Developed a full-featured Android app in **Java & Android Studio** with category-based expense tracking, monthly summaries, and interactive MPAndroidChart visualizations.
- Integrated Room database for local persistence with background thread operations (AsyncTask / Executor), ensuring zero UI-thread blocking for all data operations.

EDUCATION

Jaypee University of Engineering and Technology Guna, India
B.Tech in Computer Science & Engineering | CGPA: **9.1 / 10** *Oct 2021 – May 2025*

ACHIEVEMENTS

- **1st Place** – XR Creator National Level Hackathon *Apr 2025*
- **Top 50 Teams** – HackSquad Open-Source Hackathon *Dec 2023*
- **1st Place** – Hashhacks Hackathon, CIC, Delhi University *Feb 2023*

CERTIFICATIONS

- **Programming Fundamentals in Kotlin** — Meta (Coursera) *Jul 2023*
- **Version Control** — Meta (Coursera) *Jul 2023*
- **Supervised Machine Learning: Regression and Classification** — DeepLearning.AI / Stanford (Coursera) *Dec 2022*

EXTRA-CURRICULAR ACTIVITIES

Position of Responsibility

- **Advisor, RosPinoT** *Aug 2024 – May 2025*
  Mentored team members, guided robotics project development, and supported technical decision-making for the student club.

Activities

- Competitive badminton player, regularly participating in inter-college tournaments.
